

Rajashri Gaikwad

B.Tech Student | AI & Machine Learning

📞 9970234643 | ✉️ gaikwadrajashri7@gmail.com | 📍 Kopergaon

PROFILE

2nd year AI & ML student with hands-on experience in NLP, deep learning, and transformer-based models. Actively exploring LLM fine-tuning techniques including prompt engineering and transfer learning. Seeking an internship to apply and grow my skills in real-world AI applications.

OBJECTIVE

To gain practical exposure in LLM fine-tuning and NLP research as part of my B.Tech journey. Eager to work with transformer architectures, explore techniques like LoRA and instruction tuning, and contribute meaningfully to an AI-driven team while strengthening my foundations in applied machine learning.

EDUCATION

B.Tech in CSE (AIML Specialization) — Sanjivani University | Pursuing

- First Year CGPA: 8.39

HSC 12th (81%) - Completed schooling from Atma Malik secondary and Higher Secondary

SSC 10th (92%) - Completed schooling from Atma Malik school 2022 - 2024

TECHNICAL SKILLS

- Programming Languages: Python, C++, MySQL, Java
- AI/ML: Machine Learning, Deep Learning, Natural Language Processing (NLP)
- Libraries & Tools: NumPy, Pandas, Scikit-learn, TensorFlow
- Other: Web Development, Git, LLM (basic usage & prompt engineering)

SOFT SKILLS

- Project Management | Public Relations | Teamwork | Time Management • Leadership | Effective Communication | Critical Thinking

CERTIFICATIONS

- IBM Certified – Introduction To Python
- IBM Certified – Agentic AI (Prompt Engineering & LLM Workflows)
- Celonis Academy – Process Mining Fundamentals
- Nasscom – Digital 101 Journey
- Currently self-studying: LLM Fine-tuning with Hugging Face & LoRA (via online resources) • Academic Achievement: Scored 8.39 CGPA in First Year

PROJECTS

1. FAQ Chatbot using Fine-tuned Language Model

- Fine-tuned a small pre-trained language model (GPT-2) on a custom FAQ dataset using Google Colab to answer domain-specific questions.
- Prepared and cleaned training data in JSONL format, handled tokenization, and ran fine-tuning using Hugging Face Trainer API.
- Observed improvements in response relevance after fine-tuning compared to the base model on the same prompts.
- Tools: Python, Hugging Face, Google Colab, GPT-2

2. Hinglish Sentiment Analyzer

- Built a sentiment classification model for Hinglish (Hindi-English mixed) social media text — a linguistically challenging and underexplored NLP problem.
- Used a multilingual pre-trained model (MuRIL) with a publicly available Hinglish dataset to classify text as positive, negative, or neutral.
- Achieved ~78% validation accuracy; model handled code-switching patterns better than standard English-only models.
- Tools: Python, MuRIL, Scikit-learn, Google Colab

3. Fake News Detector using NLP

- Developed a binary text classification model to detect fake vs. real news headlines using a fine-tuned BERT-based model.
- Preprocessed a labeled news dataset, applied tokenization, and trained the classifier with cross-entropy loss.
- Evaluated model performance using accuracy, precision, and recall metrics on a held-out test set. • Tools: Python, BERT, TensorFlow, Pandas, Google Colab

LANGUAGES

- English (Fluent) | Hindi (Fluent) | Marathi (Fluent) | Japanese (N5 – Beginner)
